

Sexual Harassment of Women Reflections on the Private Sector

[epw]

[Download pdf](#)

The private sector in India has by and large not been very receptive to women's complaints about sexual harassment at the workplace. This article highlights the importance of company policies on sexual harassment, the role of their human resource departments, and says that the private sector has to clearly articulate and uphold its code of conduct to prevent and address sexual harassment at the workplace. The effectiveness of the Sexual Harassment of Women at Workplace (Prevention, Prohibition and Redressal) Act, 2013 remains to be seen.

Even while the Sexual Harassment of Women at Workplace (Prevention, Prohibition and Redressal) Bill 2013 was being discussed (before it was enacted on 22 April 2013), the national press was reporting defiance of the Supreme Court's (SC) Vishaka guidelines by multinational companies.¹ A glaring instance involved the multinational audit firm KPMG, which operates in 156 countries, including India. In 2006, a chartered accountant working in a senior position complained against a partner, but the firm failed to constitute a complaints committee as mandated by the Vishaka guidelines of 1997. Instead, her services were terminated, severely hampering her prospects for future career growth (Deshpande 2013a). She faced a disparaging campaign online after her name was revealed in 2007 in reports on the case. Her ordeal continues as she goes on with her battle. She faces problems in finding new employment, and has been branded a legal terrorist (Menon 2013).

For 15 years, government agencies such as the National Commission for Women (NCW) and women's groups consistently pressed for a law on sexual harassment. If one looked at the implementation of the SC-directed Vishaka guidelines (1997) it was observed that their implementation in the private sector remained uneven. A 2010 survey brought out that 88% of the women working in information technology (IT) and business process outsourcing (BPO)/knowledge process outsourcing (KPO) companies had suffered some form of workplace sexual harassment (Sharma 2010). Media reports and studies show that many private sector organisations do not have any special policy on sexual harassment. Even where policies exist, strict and compulsory adherence to them is rare. The dismal situation needs urgent attention. This article attempts an overview of sexual harassment in the private sector in India and puts together suggestions to overcome them. It analyses the issue on the basis of the implementation of the SC's guidelines, the importance of workplace policies on sexual harassment, and the role of human resource (HR) departments.

Reluctant Private Sector

The SC's Vishaka guidelines initiated a discourse in India on sexual harassment and benefited women by reconfirming their right to a safe working environment. They proposed providing a safe and gender-friendly atmosphere for working women by instituting in-house mechanisms for redressing complaints. Surveys done by organisations across India over the years have revealed that employers either choose to ignore the guidelines or to not take them seriously. Sexual harassment at the workplace remains the most under-reported form of gender discrimination (Shukla 2002) and the private sector has been very reluctant to acknowledge its existence.

Poor and faulty implementation of the Vishaka guidelines has been discussed by Oversier (2010) and Majumdar (2003). The industry persons and academicians quoted in these studies confirm that the issue of sexual harassment has largely been swept under the carpet in India. Further, they accept that the provisions have never been successfully invoked because of the social taboos still associated with sexual harassment and the long delay if a case ends up in court. Overall awareness among Indian companies about the need for a well-defined mechanism to tackle sexual harassment at the workplace is terribly poor. Moreover, multinational companies seemed to be taking advantage of the space left by the absence of a law.

Sarpotdar (2012) gives an insight into the uphill task women face. Challenging an employer is overwhelming and practically difficult for any woman who has faced sexual harassment, given the enormous cost it entails in terms of time, energy, and determination. Fighting powerful transnational companies, which have tremendous resources, is liable to crush women as it is not just a question of tackling an unyielding employer, but also confronting bureaucratic challenges thrown up by the police and the courts. Women's rights activists point out that organisations generally view such cases from the perspective of their public image and not as a breach of an individual employee's right to dignity and safety, leading to skewed attitudes and hushing up of such cases (Deshpande 2013b).

It is important to note that the SC in an interim order issued in 2006 designated the labour commissioner's office of each state as the nodal agency to collect details about complaints of sexual harassment and to make sure that the required committees are established in factories, shops and commercial establishments.² Records at the Maharashtra Labour Commissioner's office examined by Pinglay (2012) showed only three complaints from 2010 to 2012, while there were 700 complaints registered unofficially at the Karnataka Labour Commissioner's office (Phadnis 2013). This revealed serious problems in companies complying with the SC's directions. Taking cognisance of this, the apex court reiterated its directions in *Medha Kotwal vs Union of India* (2012), with special reference to nursing homes, law, architecture, and engineering firms. It directed statutory institutes to ensure that the organisations, bodies, associations, institutions, and persons registered/affiliated with them followed the Vishaka guidelines.

In 2011, a report by a Joint Parliamentary Committee (JPC) reviewed the Sexual Harassment Bill 2010 and summarised the issue.³ It recorded that the absence of a central mechanism meant there was no database with the Ministry of Women and Child Development on the number of complaints, their resolution, and the action taken, especially in the private sector. As a consequence, the extent of implementation of the Vishaka guidelines in the private sector could not be ascertained. The JPC concluded that in the absence of penal provisions, compliance by employers in the private sector could be lax, and that the SC's guidelines probably remained on paper in a majority of workplaces.

Importance of Policy

A deficiency of policies or poor policies to deal with sexual harassment at the workplace is not the issue, but non-adherence to the existing policies. In addition, there is a paucity of trained personnel to implement the policies and handle cases of workplace sexual harassment (Sharma 2010). Studies ascribe this to a lack of commitment on the part of company heads, who do not assign due importance to the issue of workplace sexual harassment on their organisational agendas.

The approach of the private sector to sexual harassment policies can be explained by drawing on Ravichandar (2010). There are five mental blocks that chief executive officers (CEOs) and managements face in implementing robust policies against sexual harassment. They can be summed as the five Ds – denial, dismissal, double up, delegation, and danger. It is seen that most companies live in a state of denial. They believe that sexual harassment does not exist in their organisation because there are no reported cases. They also believe that they are open enough, and any employee can openly report sexual harassment. Companies tend to dismiss the

issue as unimportant because they do not want to give priority to it. Majumdar (2003) points out that the course adopted by companies is to ignore such complaints in the hope that everything will be forgotten and forgiven in due course, and in the belief that managements need not get involved in the "mess". Many companies believe that there is no need for a separate committee or policy to deal with sexual harassment because the HR department will be able to handle the situation when the need arises and that the employee code of conduct will be adequate for this.

But it is important to understand that sexual harassment is a socio-legal issue surrounded by shame, stigma and confusion. A general code of conduct may not address the requirements and specifics of the issue. It is necessary that a special policy be formulated and institutionalised, which ensures empathetic response, sensitive handling, mature investigation, and prompt implementation of the recommendations made by the complaints committee on sexual harassment to the management. While there are strict policies followed globally to counter the problem, such policies are only slowly beginning to take shape in Indian companies (Ghosh, Puri and Dewan 2010). In the absence of service rules, the Sexual Harassment of Women at Workplace (Prevention, Prohibition and Redressal) Act, 2013 (Rajya Sabha Secretariat 2011) underlines the necessity of a policy in private organisations that expresses zero tolerance to sexual harassment at the workplace and explains the provisions of the law in simple language with examples.

Human Resource Teams

It is important to look at the role of HR departments in preventing and dealing with complaints of sexual harassment. Daft (2009) says that global firms have to abide by local laws and regulations on wages, employment safety, consumer protection, and other such issues. The right to a healthy and safe work environment is the basic democratic right of all workers (Creighton 1984). Macdermott (1995) explains that this right is given expression through employers providing a work environment free from sexual harassment. HR teams within companies are primarily responsible for providing mechanisms to prevent, deter, and redress sexual harassment. They have a crucial role to perform when it comes to implementing an organisation's policies on sexual harassment, diversity, and so on, and in facilitating resolution of complaints.

It is important that HR departments follow three steps that can effectively deal with the hazard of sexual harassment. One, the HR department, in coordination with the legal department, should issue a written policy on sexual harassment and discrimination in general. Two, this policy should express zero tolerance to sexual harassment at the workplace. Three, it should define sexual harassment, giving relevant examples of inappropriate behaviour, outline the procedure to redress complaints of sexual harassment, and emphasise that there will be no retaliation against complainants. A copy of the policy should be provided to every employee, especially new recruits at the time of induction training. The policy should be regularly reviewed to suit changing times. A senior officer of the HR department should monitor and evaluate implementation of the policy. This officer can function as a link between the HR department and the sexual harassment complaints committee of the company.

Managers and supervisors should be made aware of sexual harassment, and trained to recognise and prevent instances of it happening around them. Women employees have to be encouraged to not tolerate incidents of unwelcome behaviour at work and report them. HR departments need to make sure that all allegations of sexual harassment are enquired into at the earliest, making sure that the rights of the complainants and witnesses are safeguarded. Detailed and systematic records of interventions and enquiries have to be maintained by HR departments. Since these departments are key to maintaining discipline in companies, they should ensure that action is taken against those found guilty of committing sexual harassment, irrespective of their position.

The Way Forward

It is known that women in India look at formal complaints of sexual harassment as the last alternative because they do not want to be seen as challenging their employers or creating a disturbance in the organisation. Private organisations have to initiate a dialogue and discussion on policies against sexual harassment, taking sociocultural nuances into consideration. Adhering to the policies, and government agencies and industry confederations monitoring their implementation is the next step. It is mandatory for employers to remind employees that they will not tolerate sexual harassment by anyone.

The 2013 Act is the codification of the SC directions regarding sexual harassment at workplace. It recognises that every woman has a right to work with dignity and sexual harassment as violation of fundamental rights of working women. Therefore in accordance with the law, the private sector organisations need to clearly articulate their position by upholding their code of conduct to prevent and address sexual harassment at the workplace, and by having a transparent system for redressal. While companies are gradually taking and now legally mandated to take corporate social responsibilities seriously, there should be a focus on corporate responsibility towards employees and the need to provide them with a safe and harassment-free work environment.

Cost analysis (Adjusted to present rate) of civil services preparation : Is the fees charged by coaching institutes justified

Cost comparison by Mr.Gokul G R (IAS, AIR 19, CSE-2010)

Option one: You study back home

1. General Studies

Books : Rs. 5000

Newspapers : Rs. 250 monthly (Total : 6000 for 2 years; you will anyway subscribe, whether you are preparing or not)

Periodicals : Rs. 650 for frontline (2 years) + Rs.900 for EPW (one year)

Net connection : 500 per month (Total : 12000; you will anyway subscribe, whether you are preparing or not)

Total Cost : Around 25000 (over 2 years)

2. Optional:

Books: 4-5 books for humanities optionals (Mostly Indian Authors). Total cost : Not more than Rs. 4000.

7-8 books for science optionals. Total cost: Not more than Rs. 6000 (If you are not downloading pirated copies).

Total Extra cost : Rs. 16000 (Highly liberal estimate and spend over 2 years). Use library, old books or pirated copies and you can bring that down to a few thousand rupees.

Option two : You go to Delhi to attend coaching.

1. Coaching fees :

G.S : Rs, 70,000-100000

Optional : Rs. 30,000-60000

Total : Rs. 1,20,000 (spot payment)

2. Periodicals, newspapers, net for personal use : Rs. 15,000 over 2 years.

3. High rent and cost of living : Around 10k every month.

Total extra Cost : Around **3.5 Lakhs** (

Conservative estimate; multiply with no.of failed attempts, extra fee

for extra coaching etc). And even after paying such huge, exorbitant

costs, the quality of teaching (as i get to know from fellow aspirants)

may not always be up to the mark.

A question of vision, not sight

[hindu]

A new television series is trying to change society's attitude towards the visually impaired.

"My family members don't realise what I am doing on my own without their help.

They only see what I don't or cannot. This upsets me no end." I remember these words by a senior research scholar I knew. He was visually impaired.

That was in the early 1990s. Today efforts are on to make people understand that visually-impaired people, if granted resources and encouragement, are no less than a person with normal vision. One such endeavour is *Nazar Ya Nazariya*, a new serial on Doordarshan aired every Saturday at 9.30 a.m., which highlights the achievements of visually-impaired people in different fields. Each episode is introduced by actor Naseeruddin Shah – who incidentally played a visually-impaired principal of a school in Sai Paranjpe's critically acclaimed film *Sparsh* in 1980. Television actor Harsh Chhaya anchors the series.

The serial will feature 32 case studies from across India. For example, a visually- and hearing-impaired dance group from Bijour, a businessman in Guwahati, a theatre group in Kolkata, a national swimming champion, a journalist, a national level chess player and people in corporate and rural India. One episode showed how visually-impaired students have to drop science and math after Std. VIII. It featured two boys – Karthik Sahni from Kolkata who scored 96 per cent in these subjects and has been offered a Stanford scholarship, and Prateek Dutta who did cryptology from IIT Kanpur and has been conferred the J.C Bose Award – and raised the question of whether the problem lay with the student's capability or in the teaching.

In other episodes, visually-impaired achievers talk of their lives or showcase their skills, while making viewers realise that they are leading normal lives.

The serial was conceived of by George Abraham, Chief Executive Officer of Score Foundation, an NGO dedicated to finding resources for the visually-impaired. This is his debut production, in association with Sightsavers, an international charity that works to combat blindness in developing countries.

"The idea is not to raise [awareness of] problems, because everyone knows about them. It is about making people change their *inse nahi hoga* (They can't do it) attitude. It is about trying to show that blindness has lot of possibilities and if proper training is imparted, the blind can be utilised as the best human resources available," asserts George. The serial will also suggest that the government policies ought to support the visually impaired. "We are not focusing on what they can't do but on what they can. We are asking if the problem is one of *nazar ya nazariya* (lack of sight or lack of vision)," he adds.

A team of 10 people travelled across India and throughout, George says, they met curious people. Children were more interested in the "subjects" than the shooting and wanted to know if serial timings would clash with their school timings.

Handling the team had its own issues. Transferring his sensibilities to the team was a challenge. For instance, "the camera would focus on the subjects' eyes. I didn't want that usual negative attitude throughout a 22-minute episode. So, I had to intervene to show them as normal human beings," he recalls.

George had conceived of the idea many years ago and even spoken to actor Shashi Kapoor about it but it didn't take off. "After a talk with Tripurari Sharan, the Director General of Doordarshan, I posted the idea on Facebook and filmmaker Somu Ghosh contacted me. With their cooperation, my dream became a reality,"

says George.

Though the timing is not audience-friendly, George insists this slot has less competition, and he doesn't have to contend with soap operas on prime time.

Scripted by Sehba Imam and directed by Mohammad Faizan, the serial already has people like Shashi Tharoor, Harsha Bhogle and V.V.S Laksman tweeting about it, while MSN and Godfrey Phillips's Be Brave website also promote it. The team is also researching the impact of the serial simultaneously.

Breeding and health management in dairy

[hindu]

Breeding and health management are the two key points for dairying to be profitable. There are two ways to increase the breeding efficiency of buffalo and cows.

First is selection of genetically superior females, free from any reproductive and systemic diseases, and no physical abnormalities, having yearly calving, good growth of calves and lower age at first calving.

Timely observance of heat and mating of females at appropriate time and pregnancy diagnosis can help improve reproductive efficiency and thus genetic progress.

Due importance

Artificial insemination is the most successful method for breed development and should be given due importance because maintaining a number of breeding bulls is a costly issue and reduces the rate of genetic improvement.

If farmers maintain breeding bulls then care should be taken to see that the animal conforms to the breed type and should be a progeny from high yielding breed.

The bull should be free from disease and vaccinated and tested for any infections regularly. Record keeping is a must for all breeding activities and milk production of the females in the herd.

Breeding bulls should be allowed to walk regularly and not kept tied so that they may not become fat and have problems in natural mating or in donating semen.

Vaccination

Special drive for vaccination against various contagious diseases such as Foot and Mouth Disease (F.M.D.), Haemorrhagic Septicaemia (H.S.), Black quarters disease (B.Q) etc. must be followed according to the schedule.

The animals should be served at the doorstep by local veterinarian and awareness created among the dairy livestock keepers. Free inputs should be made available for various diseases and for parasitic control.

This would certainly avoid the expenses incurred on routine treatment and production losses due to illness.

Khharif rice output projected to drop to 92.32 mn tonnes: Govt

[hindu]

But total foodgrain output was estimated at 128.20 million tonnes

Country's rice production is projected to drop to 92.32 million tonnes in the kharif season this year due to deficient rains in some states, but the overall foodgrain output is estimated to rise marginally to 129.32 million tonnes in the same period.

The rice production stood at 92.76 million tonnes in the kharif (summer) season of the 2012-13 crop year (June-July), while total foodgrain output was estimated at 128.20 million tonnes.

"As per the first advance estimate for kharif season of 2013-14, rice production is estimated at 92.32 million tonnes in the kharif season of this year," Agriculture Commissioner J S Sandhu said at the national conference on rabi (winter) crops.

The estimate for rice output is kept lower as deficient rains in Bihar, Jharkhand and North East have affected the kharif crops, he said.

Also, the flood situations in Assam, Bihar, eastern Uttar Pradesh and West Bengal have an impact on the kharif crops, he added.

Mr Sandhu said, however, maize production is projected to increase to 17.78 million tonnes in the kharif season of this year, against 16.04 million tonnes in the year-ago period.

Pulses production is also estimated to rise to 6.01 million tonnes from 5.91 million tonnes in the review period.

Whereas millet production is forecast at 13.21 million tonnes in the kharif season of this year, he said.

Sowing of kharif crops begin with the onset of southwest monsoon from June, while harvesting starts from October.

According to Indian Meteorological Department, the 53 per cent of the country received normal monsoon. One-third of the country received excess rains.

Monsoon has withdrawn from western and northern regions of the country. Early withdrawal of monsoon has created heat stress in central parts of the country, Mr Sandhu added.

The Agriculture Ministry releases production estimates at different stages of crop.
